Professional Summary

Java Spring Boot Backend Developer with 1 Year of Experience building and maintaining enterprise-grade applications. Skilled in Core Java, Spring Boot, RESTful APIs, and SQL. Currently contributing to **CBS** at **Hitachi Cash Management Services**, focusing on DCV module development, cash workflows, and transaction reconciliation.

Personal Information

Date of Birth: 12 Feb 2003 | Location: Mumbai, India

Skills

- **Programming:** Java Core, Java 8
- **Frameworks:** Spring Boot, Spring MVC, Spring Data JPA, Hibernate
- **APIs:** RESTful API, JSON
- **Database:** SQL Server, MySQL
- **Tools:** IntelliJ IDEA, Git, Postman
- **Concepts:** OOP, Collections, Exception Handling, SDLC, Agile

Experience

Hitachi Cash Management Services Pvt Ltd <i>Java Backend Developer — Spring Boot, REST APIs, SQL</i>	Dec 2024 – Present
• Java Spring Boot Backend Developer on the CBS (Cash Management Business System) for enterprise cash logistics and financial transaction management. • Implemented Two-Factor Authentication (2FA) to enhance application security and ensure secure user access. • Developed and enhanced the DCV (Dedicated Cash Van) module to track vehicle movement, improving operational visibility and route-level monitoring. • Implemented KM calculation and travel time logic to enable accurate tracking of driver activity and trip efficiency. • Designed and developed REST APIs consumed by multiple CBS modules for real-time DCV and authorization data exchange. • Built multi-step cash authorization workflows to support validation and approval of financial transactions. • Implemented cash mismatch handling for railway clients, improving reconciliation accuracy and audit traceability. • Optimized SQL queries and table design, improving reconciliation and reporting performance.	

Education

University of Mumbai (Sathaye College), Mumbai <i>Bachelor of Science in Information Technology (B.Sc IT)</i>	2021 – 2024 <i>CGPA: 7.67</i>
---	---

Projects

- Hotel Management System — Java Spring Boot**
- Built RESTful backend for hotel booking and admin management using Spring Boot and Spring Data JPA.
 - Implemented availability checking and booking validation to prevent double-booking scenarios.
 - Added global exception handling and optimized JPA queries for booking and availability checks.
- Expense Tracker — Java Spring Boot**
- Developed RESTful APIs for expense CRUD operations and category-wise expense tracking.
 - Implemented monthly and category-based expense summary reports.
- Attendance Management System — Java Spring Boot**
- Developed role-based attendance management system with authentication and REST APIs.
